MNIST Classification: a worked example

example-project-mnist · EXAMPLE DATA for SciTeX UI development

Models trained on the first 10,000 MNIST training images and evaluated on 2,000 held-out images (fixed seed 0).

Logistic regression test accuracy: 0.8825
kNN (k=5, 2,000 reference images) test accuracy: 0.8910

Every number in this document was computed by examples/make_example_project_mnist.py — see provenance.yaml for dataset, versions, and seeds. These are example claims, not research findings.

MNIST training samples (real data)
3 7 0 6 4 6 6 1 1 8
8 3 7 1 5 6 5 0 6 8

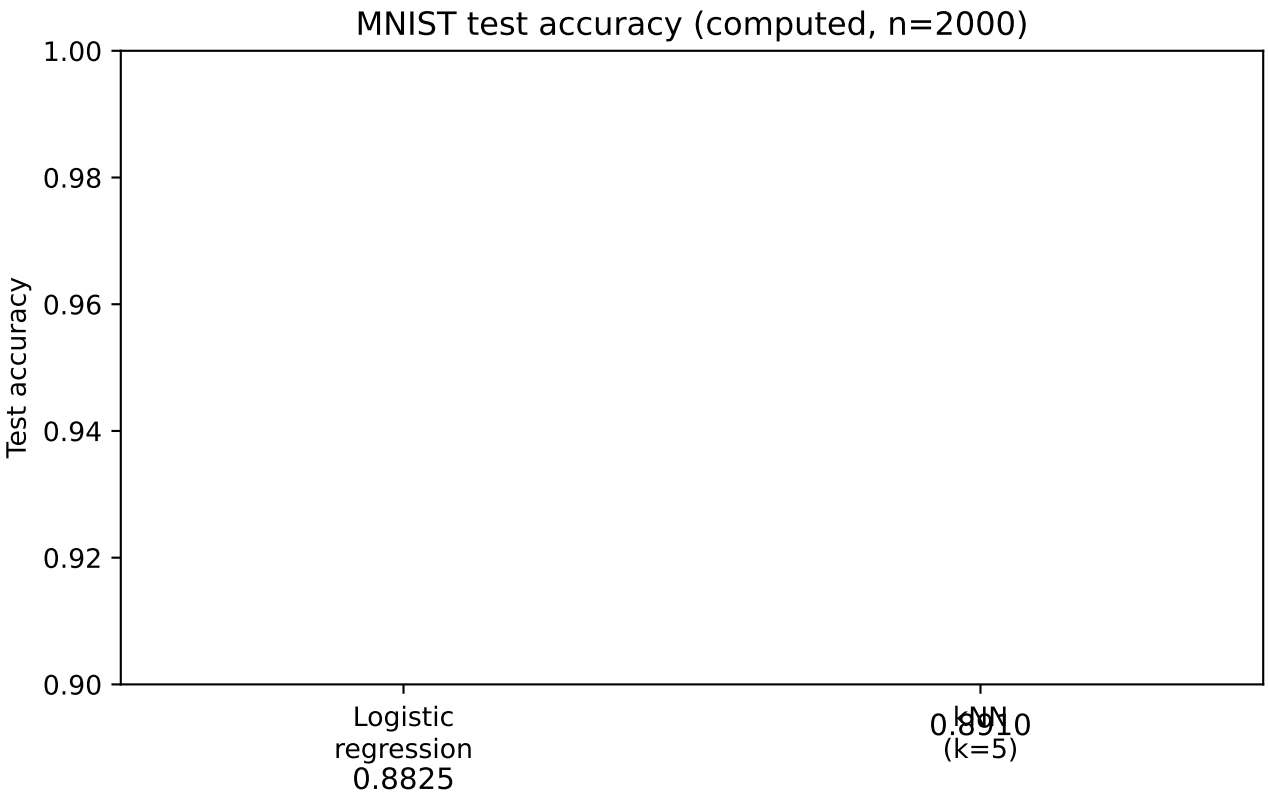

Figure 1. Held-out test accuracy of the two example classifiers. Values are computed by the generator script; claim anchors in claims.json point at these bars.
